TITLE: Laminated film of good inter-laminar adhesion -
comprises first layer of opt. modified styrene-maleic
anhydride, copolymer layer of polyamide and adjuvant
layer of EVA copolymer

PATENT-ASSIGNEE: DAINIPPON INK & CHEM KK[DNIN]

PRIORITY-DATA: 1980JP-0146294 (October 21, 1980)

ABSTRACTED-PUB-NO: JP 57070657A

BASIC-ABSTRACT:

Laminated sheet comprises first layer comprising blend of (A) styrene-maleic anhydride copolymer resin or rubber-modified styrene-maleic anhydride copolymer resin (5-50 wt.%) and (B) polyamide resin (95-50 wt.%) and second adjuvant layer of EVA copolymer. The laminated sheets have improved interlaminar adhesion.

(A) is typically prepd. by thermally polymerising styrene monomer and maleic anhydride in presence of a chain transfer agent and radical initiator and opt. in the presence of rubber (e.g. SBR, butadiene-acrylate rubber, isoprene rubber, isoprene/styrene rubber contg. 60-95 wt.% isoprene, A- or A-B- A block polymer of butadiene and styrene and contg. 60-95 wt.% butadiene and ethylene-propylene rubber) and may be added with various additives. (B) is typically prepd. by polymerising epsilon-caprolactam or copolymerising a dicarboxylic acid (e.g. adipic and sebacic acid) and diamine (e.g. hexamethylene diamine) and may be added with various additives.
